• **Assurance and audit of the entire process**
• Conclusions
Results:

• A Professional Standard Handbook on Endoscope Disinfection was created by 7 parties involved in endoscope disinfection. It is based on national guidelines on infection prevention in The Netherlands and ISO 15883-4

• The Handbook proves to be a valuable document for daily practice in flexible endoscope disinfection.

• The Dutch Healthcare Inspectorate (IGZ) officially recognized this Handbook as a reference document for their surveys on endoscope disinfection in healthcare institutions.
Conclusions:

• All members of your team must have the conviction that a proper service is delivered
• The patient should experience your professional attitude

In not all cases your patient will be cured.

But

In all cases he or she should have confidence in the safe application of the flexible endoscope
